PETITSIN OVERVIEW

“There is no comparable ornament on the market today.”

“PETITSIN” is decorative mouldings and ornament made of a highly classified company secret blend of modern materials that have been blended to hold the super-fine details and undercuts. It has been designed to facilitate the completion of the entire project. Installations that would have taken MONTHS have been reduced to a matter of days.

Characteristics that make PETITSIN unique:

“Petitsin” castings are sharper and cleaner than any other carving replications on the market. Its quality exceeds anything that can be executed in carved wood and can be PRE-FINISHED prior to installation.

“Petitsin” is PAINT-READY. Hours of labor are eliminated because NO PRE-TREATMENT with acid washing or special priming is necessary as with other companies.

The most expensive mould materials (French Silicone) are used to insure the reproduction of every nuance of the original sculpture. The moulds are remade frequently to insure detail.

What is Petitsin made of? “Petitsin” is NOT a styrofoam. It is NOT flammable. It is a very durable, resilient, bendable casting. Radiused mouldings (more torque on the outside edges) have held up beautifully for over two decades under the worst field condition in hotels & casinos where they were also subjected to extreme temperature variations. Naturally the exact material blend is a secret. . . but is an expensive blend based on the highest quality ingredients from the polyester resin family.
